

Local Computer

A local laptop or desktop that contains a graphical user interface (GUI) such as Git GUI, GitHub Desktop, or Gittkraken, which display your local repositories.

Repository C [Clone]

A local working copy of a repository (similar to folder) from the cloud. It contains a main working directory folder and a .git folder. Only the local user/administrator can work within a local repository. It can contain multiple branches.

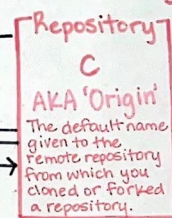

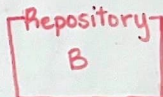

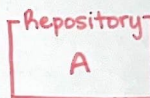

Git

A version control software (installed locally) that tracks changes to files and provides command line tools for interaction with GitHub.

GitHub

A Cloud-based (web-based/remote) open-sourced repository sharing platform, meant for groups to share, exchange, use, or edit data.

fork

Account
A personal remote collection of repositories within the cloud.

Repository B [Fork]
A remote copy of a repository from a public or shared group into a personal (cloud-based) account. Includes a working directory and .git indexing file.
